## Ringtones for iphone 7 plus free

Smartphone ringtones aren't typically something you think about — until you hear yours and want to change it to something nicer and original. While the predetermined ringtones available on iPhones are functional, it's easy to get bored with the audience the same over and over for years on your own phone and those of your friends and family. It's good to know that there are more ringtone options than Apple's diverse but limited selection. If you're looking for a new way to customize your iPhone, try creating your own original ringtones. There are no limits to the songs and sounds you can use to create an arrest ringtone. See more Best iPhone apps How to repair your iPhone The best iPhone games Create a ringtone using Apple iTunes or Music Step 1: Open and update Apple iTunes or Music Start by introducing iTunes (MacOS 14 High Sierra or older) or Music (MacOS 15 Catalina or newer) on your Mac or Windows desktop or laptop. Be sure to use the latest version of iTunes or Apple Music. To check in MacOS High Sierra or earlier, click iTunes in the application toolbar and select Check for updates from the resulting drop-down menu. If you're using the latest version of Windows 10, click the Help option in the menu bar under the playback buttons and select Check for updates near the bottom of the resulting drop-down list. If you're running MacOS Catalina or newer, start the App Store app and select Updates in the App Store toolbar. Use the Update button to download and install the latest version, if necessary. Depending on how old your music is, you may first need to handle the removal of digital rights management(DRM) protection from your track before using it as a ringtone. Also, make sure your chosen tune is downloaded to your Mac. A download icon next to your song means it resides in the cloud, so if it is, then click to download it to your hard drive. Step 2: Choose a song Here's the fun part - choose the song you want to use as your new iPhone ringtone. Keep in mind iPhone ringtones are constantly playing in 30-second (or fewer) loops, so don't pick anything stupid or embarrassing. Once you've selected your song, pay attention to the start and stop times for the 30-second piece you want to use. Step 3: Add the start and stop times To One of the lesser known features of iTunes and Music is the ability to harvest songs and videos, so you can choose specific start and end times. This is how to choose a portion of a song to use as a ringtone. First, right-click or Ctrl click on the song you want and select Song Information (Get information in MacOS Catalina or newer) from the resulting drop-down list. Then click the Options tab at the top of the window. There must be fields for Start and Stop. Type the times you want. Remember that ringtones maximize at 30 seconds, so keep it up or below that length. Once it is, click OK at the bottom. The iTunes and Music interface differs slightly, but the process on both is the same. Step 4: Create an AAC version apple's sound format is AAC because it provides similar sound quality to an MP3 but records less storage. Both iTunes and Music allow you to create an AAC version of any song you choose. Once you've set your start and stop times and selected the song, go to File &t; Link &t; Link to AAC Version or in Music Create AAC Version. Because the start and stop times for the song are set, creating an AAC version will create a copy of that particular section of the song. The copy will then automatically appear in your iTunes library, directly below the original song, trimmed to your chosen 30 seconds. Before you do anything else, go back to the original song's Information Page and return the start and stop times to their original settings. Step 5: Copy the file and remove the old one Once it's created, click the AAC version of your song and drag it to the desktop or the desired storage space. This will copy the file to that location. You probably don't need the abbreviated song in iTunes anymore, so feel free to remove the file. Right-click the AAC file in iTunes, and select Remove from the Library from the resulting drop-down menu. Then click the Remove File button in MacOS High Sierra or earlier or select Hold file or move to trash in MacOS Catalina. Change the extension and set your ringtone Step 6: Change the extension AAC files usually use the file extension .m4a, which you can see when you click on your AAC file. However, for ringtones, iTunes uses the .m4r extension, which is essentially the same as .m4a is a different name. This means that you need to change the expansion of different emails. m4a .m4r to use the clip as a ringtone. Navigate to the desktop - or wherever you saved the file - click the file's name and change the extension from .m4a to .m4r. Click the Use .m4r or Yes button in the resulting alert window to confirm the changes. Display file extensions in Windows If you are using Windows, you may find that you cannot change the file extension, at least by default. This is likely because your system is set to hide file extensions. To change this, open Control Panel from the Start menu — you can also search for Control Panel app in Windows 10 — and select appearance and personalization. Click Next File Explorer options. Now click the View tab, uncheck the box next to Hide extensions for known file types, and click the Apply button at the bottom of the window. Now you should be able to view and edit the file extension. Step 7: Add file to your iPhone to add the .m4r ringtone file to your iPhone, connect your device to your computer using a lightning-to-USB cable. Then select the iPhone icon in the upper-left corner. Go to the Summary section and scroll down to Options. Check the box next to hand manage music and videos and click Customize Now drag the .m4r file into the Tone tab located on my device, which will automatically synchronize the ringtone with your iPhone. If you have problems dragging the .m4r file the Tone tab after you apply the changes disconnects your iPhone and recharges iTunes. Then connect your iPhone and try dragging the file into the window again. If you're using macOS Catalina (or newer) and don't have iTunes, then open the Finder and click on your iPhone in the sidebar. If this is the first time you've done it since the update, you may need to click the Trust button and go through the process of opening your iPhone to your Mac. From there the steps are similar. Select the General tab, check the box next to Manual Management Music and Videos, and click Apply. There's no toes tab, so just drag your ringtone file to the name of your iPhone above the General tab. This will sync your new ringtone to your phone. Step 8: Set your ringtone for iOS 13, go to Settings &t; Sounds &t; Haptics &t; Ringtone and select your ringtone from the top of the resulting list. For iOS 14, go to Settings &t; Sounds &t; Ringtone. Keep in mind that you can always set the new ringtone as your text, voicemail, or email tone in addition to your notification sound for Facebook posts and tweets. A tone is a tone in terms of Apple, so you can use it as the default sound for any notification or warning. How to create a ringtone using GarageBand You might prefer to make your ringtone in Apple's GarageBand app by either snipping a portion of a song you like or by creating your own. You can create a ringtone on your Mac using GarageBand and share it to your iCloud Drive so you can open it in GarageBand on your iPhone. To share songs from your Mac to GarageBand for iOS, you need to enable iCloud Drive, so start by setting up iCloud Drive on your Mac and your iPhone. Once it's on your iPhone, perform the song as a ringtone of GarageBand, or just create the ringtone directly on your iPhone. Use GarageBand for iOS This is easiest if you have the GarageBand iOS app and the music track you want to use on your iPhone already. Run the GarageBand app and find the song you want to use. Note that if you haven't shortened it to 30 seconds yet, GarageBand can do so automatically, though it might not be the 30 seconds you intend. Touch and hold the song, and then select Share &t; Ringtone. Name the ringtone and tap Export. Tap Use sound ale and select Standard Ringtone, Standard Text Tone, or Assign to Contact. From a track on your Mac Here is one method you can use with an existing tune that MacOS Big Sur and GarageBand 10.3.5 - both the latest versions available. On your Mac, click Blank Project, and then click Select. Select the Audio Microphone icon and click Create. Click View &t; Show media browser to reveal your resident tunes. Select a tune you want and drag your selection from the media browser into the workspace. Move your cursor to the lower-left or right corner of the track, and you'll see an icon that you can use to click and drag to the shorten or extend to the specific part you want to use for your ringtone. When you're done choosing up to 30 seconds of right-click and select Split on Playhead, and then right-click and select Remove to remove the rest of the tune so that only the 30-second interval remains. Click Share. From this menu, you can either export the song to iTunes or Music on the desktop, or as a GarageBand for iOS file. If you select the former, follow Step 7 from the computer section above. If you have an iPhone with GarageBand on it, you can import the GarageBand for iOS file and then set it as a ringtone per the previous section. Create a track using GarageBand loops You can also build your own song from the loops available in GarageBand. Here's how. Create a blank project, and then click Select, click the microphone button, and click Create. In the upper-right corner, click the Loop icon in the middle (this looks like a loop). You can now browse available loops, drag them over to the track field in blocks. However, arrange them you like, keep the same loop that plays over and over again, or add other loops on separate tracks to create more complex songs. Once you're done, click Share, then Song to Music. You can then export the song as an m4a file and at this point you can change the extension to m4r and copy it to your iPhone. Or Share Project to GarageBand for iOS and add it as a ringtone of iCloud. Recommendations from editors
